---

### A one-day seminar organised by the Institute for Sustainable Energy of the University of Malta

Sustainable Energy is finally gaining momentum in Malta and the technology is constantly evolving. We believe that in the long term and with the expected developments in technology, Malta could go well beyond the 2020 10% renewable energy target. This seminar will focus on existing and possible future technologies and how they apply to Malta.

The seminar is being organised under the patronage of the University of Malta and the Malta Council for Science and Technology. Hon. Minister George Pullicino will be delivering the closing address. The conference will consist of several presentations on various aspects of Renewable Energy and Energy Efficiency, including their technology status and potential in Malta, followed by workshops involving all participants on what more can and should be done in Malta. All of the speakers are leading experts in the field.

The seminar is open to all interested parties, including professionals, industrial players, policy makers, government officials, teachers, students, and journalists, besides others. The seminar should be of particular interest to those interested in the latest developments in these sectors.

**Date:** 16<sup>th</sup> March 2010.

**Venue:** Villa Bighi, Kalkara, Malta.

Registration includes: Presentations of the Seminar, Buffet Lunch and Coffee Breaks.
